

Thomas P's Prototype: Gestalt principles

- Proximity: The navigation to the main pages is gathered on the left side of the map.
- Continuation: Text starts at the top left and works to the right, following the natural reading path.
- Similarity: The page navigation buttons are designed the same to show they have similar uses.

Cobie's Lofi Prototype:

- Affordance is demonstrated on the home page; the carousel has arrow buttons on the sides that suggest action to move to the previous/next slide of the carousel.

Thomas N's Lofi Prototype:

- Proximity: Everything that was related to a topic was nearby that topic on the page.
- Continuity: My site follows the same format for the majority of the pages, keeping it continuous and simple for the user.
- Error Prevention: In my site, many of the buttons loop back to each other, making it hard to get stuck somewhere. I also added a back button so it would be easier to fix an error.

Fortune T's Lofi Prototype:

- Affordances: An affordance I made with my lo-fi prototype is that the images in the gallery section can expand when clicked.
